

## Technical Datasheet Input / Output Modules with Modbus TCP Protocol with Ethernet Interface

The IO module communicates via Ethernet Interface. The module is designed to allow interface with other Modbus TCP/IP compatible devices. The module acts as an input/output device between the Modbus TCP/IP Network and the Gateway.

Digital IO module is sturdy, low power usage and easy to use.

### 8 Port AI Module with Modbus TCP Ethernet Port: -

The IO modules are mounted on DIN rail mountable casing.

The design of the modules incorporates '**resettable Fuses**' to safeguard against reverse polarity connection both for **Power** and **Communication** port.

## Specifications

### General –

|                              |                                                                    |
|------------------------------|--------------------------------------------------------------------|
| <b>I/O Connectors</b>        | 2 Pin 5.08 mm pitch pluggable screw terminals.                     |
| <b>Dimensions</b>            | 110 mm L x 70 mm B x 50 mm H                                       |
| <b>Power</b>                 | Input Power – 12 – 24 VDC or 24 V AC/DC<br>Typical – 12V DC @ 80mA |
| <b>Operating Temperature</b> | 0 – 60° C (32 ~ 140°F)                                             |
| <b>Storage Temperature</b>   | -20 - 70° C (-4 ~ 158°F)                                           |
| <b>Storage Humidity</b>      | 5 ~ 95 % RH, non – Condensing                                      |

### **Certifications**

### AI Inputs –

|                              |                                                      |
|------------------------------|------------------------------------------------------|
| <b>Channels</b>              | 8                                                    |
| <b>Input Signal</b>          | 4 – 20 mA / 0 – 20 mA / 0 – 10 V (jumper selectable) |
| <b>Accuracy</b>              | ± 2% Full scale                                      |
| <b>Input Resolution</b>      | 10-bit /12-bit resolution (optional)                 |
| <b>Isolation</b>             | Optically Isolated                                   |
| <b>External Loop Voltage</b> | + 12 VDC min                                         |
| <b>AI input impedance</b>    | 120Ω                                                 |

### Additional Features: -

Input power reverse polarity safety  
 ESD Safety IEC 61000-4-2, ± 30KV contact, ± 30KV air  
 EFT IEC 61000-4-4, 50A (5/50ms)  
 750V isolation.  
 CRC Error check.  
 Web based Configuration needed for the IO board

### Configuration Settings: -

|                            |                                                                         |
|----------------------------|-------------------------------------------------------------------------|
| <b>Communication Speed</b> | 10/100 Base-T Ethernet compatible Interface                             |
| <b>Data Bits</b>           | 8                                                                       |
| <b>Parity</b>              | None                                                                    |
| <b>Stop bit</b>            | 1                                                                       |
| <b>CRC</b>                 | Yes                                                                     |
| <b>Slave ID</b>            | (Web Selectable)                                                        |
| <b>Function Code AI</b>    | 0x03 Read Holding Registers                                             |
| <b>AI Register Address</b> | <b>10 Bit</b> -1,2,3,4,5,6,7,8 / <b>12 Bit</b> – 9,10,11,12,13,14,15,16 |

| ID | Function Description | Register Description | Modbus Function Code | Protocol | Data Type           |
|----|----------------------|----------------------|----------------------|----------|---------------------|
| 1  | AI 1 – 10 Bit        | 40001                | 0X03                 | RS485    | 16 Bit Unsigned int |
| 2  | AI 2 – 10 Bit        | 40002                | 0X03                 | RS485    | 16 Bit Unsigned int |
| 3  | AI 3 – 10 Bit        | 40003                | 0X03                 | RS485    | 16 Bit Unsigned int |
| 4  | AI 4 – 10 Bit        | 40004                | 0X03                 | RS485    | 16 Bit Unsigned int |
| 5  | AI 5 – 10 Bit        | 40005                | 0X03                 | RS485    | 16 Bit Unsigned int |
| 6  | AI 6 – 10 Bit        | 40006                | 0X03                 | RS485    | 16 Bit Unsigned int |
| 7  | AI 7 – 10 Bit        | 40007                | 0X03                 | RS485    | 16 Bit Unsigned int |
| 8  | AI 8 – 10 Bit        | 40008                | 0X03                 | RS485    | 16 Bit Unsigned int |
|    |                      |                      |                      |          |                     |
| 9  | AI – 1 12 Bit        | 40009                | 0x03                 | RS485    | 16 Bit Unsigned int |
| 10 | AI – 2 12 Bit        | 40010                | 0x03                 | RS485    | 16 Bit Unsigned int |
| 11 | AI – 3 12 Bit        | 40011                | 0x03                 | RS485    | 16 Bit Unsigned int |
| 12 | AI – 4 12 Bit        | 40012                | 0x03                 | RS485    | 16 Bit Unsigned int |
| 13 | AI – 5 12 Bit        | 40013                | 0x03                 | RS485    | 16 Bit Unsigned int |
| 14 | AI – 6 12 Bit        | 40014                | 0x03                 | RS485    | 16 Bit Unsigned int |
| 15 | AI – 7 12 Bit        | 40015                | 0x03                 | RS485    | 16 Bit Unsigned int |
| 16 | AI – 8 12 Bit        | 40016                | 0x03                 | RS485    | 16 Bit Unsigned int |

### Note: -

For MODBUS communications, a **shielded and twisted pair cable** is used. One example of such cable is Belden 3105A.

### Recommended Cable Electrical Characteristics: -

|                                          |                                           |
|------------------------------------------|-------------------------------------------|
| <b>22 AWG Cable</b>                      | Shielded and twisted pair should be used. |
| <b>Tinned Copper</b>                     | Recommended                               |
| <b>Nominal Conductor DCR</b>             | 14.7 ohm / 1000 ft                        |
| <b>Nominal Capacitance</b>               | 11 pf / feet (conductor to conductor)     |
| <b>High Frequency Non-Insertion Loss</b> | 0.5db / 100ft                             |

- Enter the IP address of the server in your web browser, this type of page will open.
- ip address for the server is 192.168.1.35

The screenshot shows a web browser window with the address bar displaying '192.168.1.35'. The main content area is titled 'MQTT Configuration' and contains a form with the following fields:

- Host IP or Domain:
- Topic:
- Username:
- Password:
- Port:
- Data Rate/Sec:

A green 'Submit' button is located at the bottom of the form.

## Specification.

### 1. Hosting Capacity:

- 8 Analog Pins.

### 2. Interface:

- A user Friendly Interface for users.

1. Host Ip or Domain
2. Topic.
3. Username.
4. Password
5. Data Rate/Sec

## Instruction:

**Host Ip or Domain:** Input the address of your MQTT broker.

**Topic:** Define the MQTT topic to which your device will subscribe or publish messages.

**Username:** Provide the username associated with your MQTT broker

**Password:** Enter the password corresponding to your MQTT broker account.

**Port:** Specify the port number for the MQTT connection (default is usually 1883).

**Dara Rate/Sec:** Define the data rate at which data will be transmitted or updated.

It is important to input the data rate in seconds when entering it.

After Entering the details click on the Submit Button  
Open the MQTT App or Browser You will get data in the given format as per showing in the image.

**Analog pin AI1 to AI8 are displayed and data corresponding to each pin will be shown in front of them.**

## Two-wire Sensor Wiring Diagram

## Three-wire Sensor Wiring Diagram

## Four-wire 4-20mA Sensor

## AI

- **Analog Input (AI) Operation:** Each channel provides two terminals: + (Positive) and - (Negative/Common). These are used to read external analog sensor signals.
- **Channel Configuration (Visual Guide):** Each of the four AI channels features two dedicated jumpers to independently set the voltage range and bit resolution. Refer to the color-coded boxes in the board diagram to configure your desired scenario:
  - **Red Box (5V, 10-bit):** Set the voltage jumper to **+5V** and the resolution jumper to **10 BIT**.
  - **Green Box (5V, 12-bit):** Set the voltage jumper to **+5V** and the resolution jumper to **12 BIT**.
  - **Blue Box (10V, 10-bit):** Set the voltage jumper to **+10V** and the resolution jumper to **10 BIT**.
  - **Yellow Box (10V, 12-bit):** Set the voltage jumper to **+10V** and the resolution jumper to **12 BIT**.
- **Sensor Wiring Connections:**
  - The analog sensor's positive signal wire should be connected to the + terminal of the desired channel.
  - The sensor's common or ground wire should be connected to the corresponding - terminal.
- **Crucial Setup Recommendation:** Always ensure that the voltage jumper setting strictly matches the maximum output range of your connected sensor (either 5V or 10V) to guarantee accurate analog-to-digital conversion and prevent data clipping.

**NOTE – By default the Jumper setting on the board is 10 V and 10 Bit.**
